Notes:

- The entity Price acts as an historic for all the prices of Transactions, and is defined by Zone.
- Zones needn't be defined by Edition.
- All relations are supposed to be total, since none of them make sense if not completely total.
- Dates and hours have been decomposed, the same is true for names
- All "XCode" have been added to ease the identification of all entities, without conflicting data
- The duration and time of each performance is stored in the Band history, so that the historic of performances for each member can be seen

Edition: StartDate. ECode, Theme

Edition: StartDate. ECode, FCode
